How KidTechies Wins Its First 1,000 Parents

A 90-day marketing plan for an AI-literacy platform for 6–16 year olds — and the blueprint for a Claude-run marketing team that executes it on a founder's budget.

PRODUCT	AGES	PRICE
4 courses · 14 missions	**6–8 · 9–12 · 13–16**	**$25 each · $70 bundle**
MODEL	FREE TIER	SIGNUP REQUIRED
One-time, no subscription	**Mission 1 + 6 stories**	**None**

Working assumptions

This plan is built around parents as the buyer, Gulf/MENA as the priority market, under $500 per month in spend, and an agent you run inside Claude without writing code. Every section is modular — change any one of these and the plan re-cuts around it.

10 What could go wrong

— Sources and caveats

SECTION 01

What the site is actually doing right now

I went through every page in your sitemap — 45 URLs across the homepage, four courses, fourteen missions, the Story Shelf, pricing, and the parent page. The product is stronger than the funnel around it. Three things will block growth no matter how good the marketing is, and two things are assets you are currently under-using.

BLOCKER 01

You cannot follow up with anyone

"No account, no sign-up, no email address. Progress is stored in this browser only." That is a beautiful child-privacy promise. As a business it means: no email list, no cart-abandon recovery, no retargeting audience, no way to sell course 2 to someone who bought course 1, and no idea which marketing worked. Every visitor you attract is a visitor you lose permanently.

The fix is not to break the promise — it is to separate the two people. **The child stays anonymous. The parent opts in.** See Section 04.

BLOCKER 02

The pricing page argues against itself

The bundle headline sells "23:48 of animated film" next to a $70 price. Read literally, that is **24 minutes of video for $70** — roughly $2.94 a minute. A parent comparing you to Create&Learn or CodaKid at $11–25 per month will bounce on that line alone.

Your own parent page tells the real story: **"approximately 8–9 hours of guided learning"** across films, hands-on activities, printable sheets, challenges, quizzes and four capstone projects. Lead with 8–9 hours. Keep the film runtime as a craft detail further down, framed as "every second animated by hand — no filler lectures."

BLOCKER 03

Zero trust signals at the point of sale

No testimonials, no named founder or educator, no company location, no contact address, no visible refund promise on the pricing page, no social accounts. Meanwhile the parent page volunteers that films lack subtitles, illustrations are placeholders, and quizzes are "still under teacher review." Honesty is a real brand asset — but on the page where money changes hands it reads as unfinished.

Move the caveats to a dated **"What we're building next"** changelog and put a 30-day refund line, a founder photo, and three parent quotes where the caveats were.

ASSET 01

The zero-friction trial is the best thing you own

A child can start Mission 1 of AI Detective Academy with no account, no card, no parent email — on a school Chromebook, in a WhatsApp-shared link, in ten seconds. Almost nobody in this category can say that. This should be the only call to action in every ad, post, and email: **"Try the first mission. Nothing to sign up for."**

ASSET 02

The Story Shelf is a content engine you already paid for

Six original fairy tales — the lantern that learned the way, the mirror that only knew roses, the clockwork nightingale — each carrying one true idea about how AI works. That is six SEO pages, six bedtime-read social series, six teacher hand-outs and six email sequences of raw material sitting idle. Nothing else in this category has it.

FIX

The site is invisible to search

Every URL in the sitemap carries the same last-modified date and a blanket "monthly" change frequency, there is no blog or article layer, and the mission pages are thin. You have 45 indexable pages and almost no query coverage for the things parents actually type. Section 05 turns the Story Shelf and the missions into that layer.

SECTION 02

Positioning: the AI school that doesn't feel like school

The category splits cleanly into two camps. On one side, free tools — Google's Teachable Machine, Machine Learning for Kids, Code.org's AI units — powerful, but they are instruments, not journeys; a parent has to build the lesson. On the other side, coding subscriptions — CodaKid, Juni, Tynker, LittleAIMaster at roughly $11–25 a month — which are really programming schools with an AI module bolted on, and which bill forever.

KidTechies sits in the gap: a **finished, narrative, one-time-purchase AI literacy course** that treats AI as a thing to understand, not a language to type. That is the whole position.

The positioning statement

> *For parents of 6–16 year olds who want their child to understand AI rather than just use it, KidTechies is an animated mission series where children discover how AI sees, learns, guesses and gets things wrong — by playing with it, not being told about it. Unlike coding subscriptions, it is bought once, needs no account, and never sends a single thing about your child to a server.*

Message hierarchy — use in this order, everywhere

RANK	MESSAGE	PROOF YOU CAN ALREADY POINT TO
1	Understanding, not just using	"Use clues to discover how AI sees, hears, compares and sometimes gets things wrong" — the AI Detective premise. No other kids' platform teaches AI's failure modes as the curriculum.
2	Nothing about your child leaves the device	No account, no tracking scripts, no advertising SDKs, no third-party analytics, plus a one-click "erase my child's data" button.
3	Try it in ten seconds, free	Mission 1 opens with no signup, no card.
4	Buy once, keep it	$70 for all four courses vs. $11–25/month competitors. Frame as "less than three months of the alternatives, forever."
5	Made like a film, not a lecture	14 hand-animated missions, Maya, Pip and Glitch, six original fairy tales, printable sheets for screen-free days.

Claims to retire

- **"23:48 of animated film"** as a headline benefit — replace with "8–9 hours of guided learning."
- **"AI for Kids"** as the effective brand name in the page title and footer. Two brands (KidTechies, AI for Kids) split every search, share and word-of-mouth you earn. Pick one — I'd keep KidTechies as the brand and use "AI for kids" only as the descriptor beneath it.

SECTION 03

The three people who will actually buy

Gulf-first, English-language, parent-paid. All three are reachable this month without a single dollar of ad spend.

PRIMARY · ~60% OF EFFORT

The Vision 2030 parent

Riyadh, Jeddah, Dubai, Doha. Professional, 32–45, one to three children in private or international school. Their child's school just started teaching AI — Saudi rolled a national AI curriculum into public education from the 2025–26 year, and the UAE has made AI compulsory from kindergarten. They feel a gap they can't fill themselves.

> *"The school sent a letter about AI classes. I don't know enough to help him with it."*

SECONDARY · ~25%

The worried screen-time parent

Global English-speaking, buys on safety before curriculum. Already anxious about chatbots, deepfakes and what their child shares online. "Smart and Safe AI Heroes" — privacy, checking what's true, knowing when a human must decide — is the course they buy first, then backfill the rest.

> *"I'd rather she learns how it fools people from you than from TikTok."*

MULTIPLIER · ~15%

The teacher and the homeschool lead

Private-school ICT coordinators, after-school club leads, homeschool co-op organisers. They don't need a login, they can project a mission on a screen, and printable sheets solve their offline problem. One of them reaches 30 families at once — treat every teacher as a channel, not a customer.

> *"Is there anything I can run in a 40-minute club with no devices for half the room?"*

SECTION 04

Fix the funnel before you spend a riyal

Six changes, all on your own site, all shippable in two weeks. Do these before any campaign — otherwise you are paying to fill a bucket with no bottom.

#	CHANGE	WHAT IT DOES	EFFORT
1	Parent email capture, child-anonymous	At the end of free Mission 1: "Want the printable activity sheet and Maya's weekly AI question for parents?" One field, parent's email, explicitly labelled parent's — not your child's. This is the single highest-value change on the list. It gives you a list, a nurture sequence, and an audience to remarket to, without touching the child-privacy promise.	2 days
2	Rewrite the pricing page value line	Lead with 8–9 hours of guided learning, 14 missions, 28 activities, 70 quiz questions, 4 capstone projects and a printable certificate. Add "one payment, yours forever" and a comparison line against monthly subscriptions.	1 day
3	Add trust furniture	A 30-day refund promise, founder name and photo, company location, a contact email, and three parent quotes (collect them by giving 20 families the bundle free in exchange for honest feedback). Move the "still in progress" caveats to a dated changelog page.	3 days
4	Privacy-respecting analytics	You currently have no third-party analytics — admirable, and it means you are flying blind. Use a cookieless, no-personal-data tool (Plausible, Fathom, or self-hosted Umami) so the promise stays literally true and you can still see which pages convert. Say so on the parent page: it becomes another proof point.	1 day
5	A teacher / school page	One page: classroom-ready missions, printable sheets, no student accounts required, no data collected — which is exactly what a school data-protection officer needs to hear. Add a "request a classroom licence" form.	2 days
6	Arabic landing page	Not the whole product — one Arabic page explaining what the platform is, for the parent who searches in Arabic and buys in English. Highest-leverage localisation per hour spent in your priority market.	2 days

The nurture sequence the email capture unlocks

1. **Day 0** — the printable sheet for Mission 1, plus "here's what your child just learned, in one paragraph you can repeat at dinner."
2. **Day 2** — a Story Shelf tale to read together, with the AI idea hidden inside it named at the end.
3. **Day 4** — the honest one: "three things AI gets wrong that your child should be able to spot." Pure value, no pitch.
4. **Day 6** — Mission 2 preview and the first offer: the $70 bundle framed against monthly alternatives.
5. **Day 10** — parent-only guide: what to say when your child asks whether AI is alive.
6. **Weekly thereafter** — "Maya's Question of the Week," one prompt to discuss at home. This is the retention asset that makes the list worth owning.

SECTION 05

Channels, ranked by return per dinar spent

Under $500 a month means organic carries the load and paid exists only to test messages. Ranked in the order you should start them.

#	CHANNEL	THE PLAY	COST	FIRST RESULT
1	The school-curriculum news hook	Saudi and the UAE both put AI into the national school curriculum. That is your permission to talk to every Gulf parent right now. Publish "Your child is about to start AI classes — here's how to help at home," in English and Arabic, and pitch it to Gulf parenting media, school newsletters and LinkedIn. Time-sensitive: this window closes as the story goes stale.	Free	2 weeks
2	Story Shelf SEO layer	Turn each of the six tales into a full page: the story, the AI idea inside it, a discussion question, a printable, and an internal link to the matching mission. Then add 12 answer-first articles targeting real parent queries — "how to explain AI to a 7 year old," "is ChatGPT safe for kids," "what should a 10 year old know about AI," "AI curriculum Saudi schools parents."	Free	6–10 weeks
3	Teacher and school outreach	Personal email to ICT coordinators at private and international schools in Riyadh, Jeddah, Dubai and Doha. Offer the full bundle free for classroom use in exchange for a testimonial and a mention in the parent newsletter. Twenty schools reached is worth more than 20,000 impressions.	Free	3–5 weeks
4	Short-form video	The animation already exists. Cut 20–40 second clips: a mission moment, then the idea named. Post to TikTok, Reels and YouTube Shorts. The highest-performing format in this niche is "AI got this wrong — can your kid spot why?" — it demos the product and the thesis in one clip.	Free	4–8 weeks
5	Parent communities	WhatsApp class groups, Gulf expat-parent Facebook groups, homeschool forums, r/homeschool. Never post a link cold — answer the question, share the free mission when it genuinely fits. Slow, unscalable, converts better than anything else on this list.	Free	2–4 weeks
6	Paid, as a message lab	US$150–300/month on Meta only, Gulf geo, parents 30–50. You are not buying customers at this budget — you are buying the answer to which of the five messages in Section 02 makes a parent click. Run five ad sets, one per message, $3/day each, two weeks. Then put the winner in every organic channel.	$150–300/mo	2 weeks
7	Micro-creators	Gulf and Muslim-parent creators with 5k–50k followers. Offer the bundle plus a modest fee or affiliate share rather than flat sponsorship. Three good ones beat one expensive one.	$0–200/mo	5–8 weeks

SECTION 06

The 90 days

Three phases. Each has one job, and the next phase does not start until that job is done.

Phase 1 · Build the bucket DAYS 1–30

Job: make the site capable of capturing, converting and measuring. No campaigns yet.

- Ship all six funnel fixes from Section 04.
- Stand up the agent stack in Section 08 — brand-voice skill, fact file, two scheduled tasks.
- Give 20 families the full bundle free; ask for one honest paragraph each. Publish the three best.
- Write and schedule the six-email nurture sequence.
- Publish the curriculum news-hook article in English and Arabic while the story is live.
- Open one social account and post 12 clips — not to grow, but to learn which cut holds attention.

Exit test: a stranger can find the free mission, finish it, leave an email, and receive email one — and you can see all four steps in your analytics.

Phase 2 · Find the message that works DAYS 31–60

Job: learn which of the five messages sells, and to whom.

- Run the five-message Meta test. Kill anything under a 1% click rate by day 10.
- Publish all six Story Shelf pages plus the first six articles.
- Email 40 schools; aim for five classroom pilots.
- Post three clips a week; double down on whichever format survives.
- Ask every buyer one question at checkout: "where did you first hear about us?" — the cheapest attribution that exists.

Exit test: you can name your best channel, your winning message, and your cost per email captured.

Phase 3 · Pour it in DAYS 61–90

Job: concentrate everything on what worked and open the school channel properly.

- Move the full budget to the one channel that produced sales. Stop the others.
- Turn the pilot schools into case studies and a paid classroom licence tier.
- Launch the first seasonal offer — a school-holiday or Ramadan family bundle with a gift option.
- Recruit three micro-creators using the winning message as their brief.
- Publish the second six articles; refresh anything ranking on page two.
- Decide the pricing question in Section 07: keep one-time, or add a family / multi-child tier.

Exit test: a repeatable weekly loop that produces sales without you inventing something new each Monday.

SECTION 07

The numbers that govern everything

A one-time $70 purchase with no subscription means your lifetime value is capped at about **$68 net of payment fees** unless you add a second product. That single fact sets every other limit in this plan.

MAX VIABLE CAC **$20** 3.4× payback on the bundle	TARGET COST / EMAIL **$1.50** at a 12% list-to-sale rate	FREE → PAID TARGET **6–10%** of Mission 1 finishers
DAY-90 EMAIL LIST **1,000** the real asset being built	DAY-90 SALES **60–120** $4.2k–8.4k revenue	CLASSROOM PILOTS **5** each = 25–30 families

Track exactly six numbers weekly — visitors, free-mission starts, free-mission completions, emails captured, sales, and cost per sale. Completion rate is the one most founders skip and the one that predicts everything: if children don't finish Mission 1, no amount of traffic will save the funnel, and the problem is the product, not the marketing.

Two pricing questions worth resolving in Phase 3

- **A family tier.** Your buyer often has two or three children. $70 for one child and $70 for the next is a friction point that a $99 "all your children" tier removes — and it raises average order value in the same breath.
- **Gulf price sensitivity is low; South Asia's is not.** If you later open India, $70 will need a local tier. Don't discount globally to solve a regional problem.

SECTION 08

The AI marketing agent, built in Claude

This plan asks for the output of a three-person marketing team. You have one founder and under $500. The gap is closed by turning the repeatable parts — research, drafting, translating, analysing, list-building — into a set of Claude agents that run on a schedule and hand you work to approve.

Build it in two stages. Stage one needs no code at all and can be running this week.

> **How the pieces fit together**
>
> A shared knowledge base of five markdown files feeds six specialist agents. Each agent runs on its own cadence and writes drafts into a folder. Nothing reaches the public without passing your approval — that is the point: the agent removes the drafting labour, not the judgement. Approved work then goes out to the site and blog, social, email, and the school inbox.

Stage one — no code, running this week

Three ingredients, all inside Claude: a **connected folder** holding the knowledge base, a set of **skills** that encode how KidTechies writes and what it may claim, and **scheduled tasks** that wake Claude up on a cadence and hand you finished drafts.

The knowledge base — write these five files first

- `brand-voice.md` — how KidTechies sounds. Warm, plain, never patronising; explains uncertainty rather than hiding it; talks to the parent as an equal and never uses fear. Include three paragraphs you'd be proud of and three you'd reject, with a note on why.
- `product-facts.md` — the true numbers: 4 courses, 14 missions, 8–9 hours of guided learning, 28 activities, 70 quiz questions, 4 capstones, $25/$70, ages 6–16, no account required. This file is what stops the agent inventing things.
- `claims-allowed.md` — what you may and may not say. No outcome promises ("your child will get into engineering"), no comparisons you can't evidence, no "guaranteed."
- `audience.md` — the three personas from Section 03, in their own words.
- `child-safety-rules.md` — never write copy addressed to a child that asks for personal information; never use fear-of-falling-behind on parents; never depict a real identifiable child.

What each agent does

AGENT	ITS JOB, CONCRETELY	CADENCE	NEEDS
1 · Market Listener	Searches for Gulf AI-education news, ministry announcements, competitor pricing and feature changes, and questions parents are asking in public forums. Returns a one-page Monday briefing with three suggested content angles.	Weekly, Monday	Web search
2 · Content Factory	Takes one mission or Story Shelf tale and produces a complete package: a 900-word article, five social captions, one video hook script, and one nurture email — all in brand	3× weekly	Knowledge base

AGENT	ITS JOB, CONCRETELY	CADENCE	NEEDS
	voice, all fact-checked against product-facts.md.		
3 · Arabic Localiser	Produces the Arabic version of anything approved — modern standard Arabic, Gulf-natural phrasing, not a literal translation. Flags anything that doesn't carry culturally.	On demand	Knowledge base
4 · Funnel Analyst	Reads your analytics export and payment CSV, computes the six weekly numbers, compares to last week, and gives you one recommendation — not ten.	Weekly, Friday	Folder + CSVs
5 · Creative Tester	Generates ad and hook variants for each of the five messages, logs them in a sheet with their results, and tells you which to kill.	Fortnightly	Folder + sheet
6 · School Outreach	Builds a list of private and international schools in your target cities with their ICT or innovation lead, then drafts a personalised email per school referencing something real about that school.	Weekly, Tuesday	Web search

Two prompts to start with

Paste these into a scheduled task. They assume the knowledge base folder is connected.

AGENT 1 · MARKET LISTENER · WEEKLY · MONDAY 07:00

```
Read brand-voice.md, product-facts.md and audience.md from the KidTechies
marketing folder first.

Then research and report on the past 7 days:
1. Any government, ministry or school-system announcement about AI in
   education in Saudi Arabia, UAE, Qatar or Kuwait.
2. Pricing, feature or positioning changes at CodaKid, Create&Learn,
   Tynker, Juni Learning and Code.org's AI track.
3. Three questions parents asked publicly this week about children and AI
   (forums, Reddit, Quora, news comments) that KidTechies could answer.

Output a one-page briefing:
- What changed (max 5 bullets, each with a source link)
- Why it matters to KidTechies (2 sentences each)
- Three content angles ranked by urgency, each with a headline I could
  publish as-is

Rules: cite a source for every factual claim. If you find nothing
significant in a category, say so - do not pad. Never assert a
KidTechies product fact that isn't in product-facts.md.
```

AGENT 2 · CONTENT FACTORY · MON / WED / SAT 08:00

```
Read brand-voice.md, product-facts.md, claims-allowed.md, audience.md and
child-safety-rules.md before writing anything.

Pick the next unused item from content-queue.md (a mission or a Story
Shelf tale). Produce one package:

1. ARTICLE - 800-1000 words, answer-first, aimed at the "Vision 2030
   parent" persona. Opens with the parent's real question, answers it in
   the first paragraph, then earns the rest. One link to the free first
   mission, placed where it genuinely helps. No hard sell.
2. FIVE SOCIAL CAPTIONS - two for Instagram, two for LinkedIn (aimed at
   teachers), one for TikTok/Reels as a spoken hook under 20 seconds.
```

```
3. ONE NURTURE EMAIL - subject line plus body, under 200 words, one idea,
   one link.
4. A 25-second VIDEO HOOK SCRIPT built on the format: show AI getting
   something wrong, then ask whether a child could spot why.

Then self-check before you finish:
- Every product number matches product-facts.md exactly
- No claim appears that claims-allowed.md forbids
- Nothing addressed to a child asks for any personal detail
- Reading level suits a busy parent, not an academic

Save each piece as its own file in drafts/YYYY-MM-DD/ and give me a
three-line summary of what you wrote and why.
```

Wiring it up, in order

7. Create a **`kidtechies-marketing`** folder on your machine and connect it to Claude. Write the five knowledge files into it.
8. Turn **`brand-voice.md`** and **`claims-allowed.md`** into a saved skill so every future session picks up the voice automatically without you pasting it.
9. Create the scheduled tasks — start with agents 1 and 2 only. Add the rest once you trust the output.
10. Connect Google Drive so drafts land where you already work, and your analytics and payment exports are readable by the Funnel Analyst.
11. Set the rule that makes the whole thing safe: **nothing publishes without your read.** The agent's job is to make approval a 20-minute morning task, not to remove you from the loop.

Stage two — the coded version, if and when you outgrow stage one

You will know it is time when approving drafts stops being the bottleneck and publishing them does. At that point the same six agents move onto the Claude Agent SDK: each becomes a subagent with its own tools, a small database holds campaign state and what has already been published, and connectors write directly to your CMS, email platform and social scheduler. Approvals move to a single message with approve/reject buttons. The design does not change — only the last mile becomes automatic. Build it only once stage one has proven which agents you actually use; most founders find two of the six carry the value.

SECTION 09

Your week, once this is running

About five hours of founder time. Everything else is the agent's.

DAY	THE AGENT HAS ALREADY DONE	YOU DO	TIME
Monday	Market briefing and content package 1 in your drafts folder	Read the briefing, pick the week's angle, approve or redirect the package	45 min
Tuesday	Ten school prospects with drafted personal emails	Read each draft, add one human line, send	40 min
Wednesday	Content package 2 plus Arabic versions of last week's winner	Approve, publish, post	45 min
Thursday	—	The part no agent can do: talk to two customers. Ask why they bought and what nearly stopped them.	60 min
Friday	The six numbers, the week-on-week comparison, and one recommendation	Act on the one recommendation. Only one.	45 min
Saturday	Content package 3 queued for the week ahead	Skim, queue, close the laptop	20 min

SECTION 10

What could go wrong

RISK	WHY IT MATTERS HERE	WHAT TO DO ABOUT IT
The agent invents a product fact	A wrong number in an ad aimed at parents is a trust problem, not a typo — and this audience is buying trust.	product-facts.md plus a mandatory self-check step, plus your read before publish. Never let an agent publish directly in stage one.
AI-written content reads like AI	Parents in this category are unusually sensitive to it, and it undercuts a brand built on human craft.	Your Thursday customer calls feed real phrases back into brand-voice.md. The voice file should get better every month, not sit static.
Marketing to children	Advertising standards in the Gulf, the EU and the US treat child-directed advertising strictly, and a privacy-first brand cannot be seen to breach it.	All paid targeting and all copy addresses parents and teachers, never children. This is already in child-safety-rules.md — keep it there.
One-time revenue plateaus	Day 91 arrives, the list is built, and there is nothing left to sell them.	Decide the second product during Phase 3: a family tier, a fifth course, or a classroom licence. Build the list now so the answer has somewhere to land.
The news window closes	The Gulf curriculum story is the strongest hook you will get for free, and it is perishable.	Publish that article in week one, not week six.

18.

19.

A note on the figures

Market-size and competitor-pricing figures come from third-party published sources and should be re-checked before they go into anything investor-facing. The financial projections in Section 07 are modelled from your published prices, not from your actual traffic — replace them with real numbers as soon as analytics is live.
